USE AND STORAGE
OF HOSE LINES
Safety notes

In the interest of security and the life span of the hoses, the following notes should be considered mandatory. In addition to these notes, appropriate publications by professional associations or other regulatory bodies should be referred to as reference documents.

Protection of the environment when hose lines malfunction

Careful consideration should be given on determining the best location and method of securing of the hoses, in order to minimise the risk in the event of a hose failure.

Installation

In order to guarantee the good service of the hoses, the following points should be considered:

- + Hose lines must be laid in such a way that its natural position and movement are not obstructed
- + The hoses should not undergo any external forces, in the form twisting, or tensile loads.
The minimum bend radius of the hoses, specified by the manufacture should not be exceeded
